SUMMARY

Detail-oriented Backend Engineer with 3 years of experience building scalable Java Spring Boot microservices and distributed systems. Skilled in designing event-driven architectures using Kafka and MongoDB, implementing CI/CD optimizations, and developing integration testing frameworks using Testcontainers. Proven record of improving release reliability, reducing CI/CD times by 40%, and creating an AI-assisted debugging system to accelerate root-cause analysis. Strong focus on performance, fault tolerance, and operational automation.

TECHNICAL SKILLS

Languages: Java, SQL

Frameworks: Spring Boot, Spring Batch, REST APIs, Microservices

Messaging and Data: Apache Kafka, MongoDB, Elasticsearch

DevOps and Cloud: CI/CD, GitHub Actions, Gradle, Docker, Microsoft Azure (Blob Storage)

Testing and Tooling: Testcontainers, JUnit, Log Analysis, Root-Cause Analysis

WORK EXPERIENCE

Java Full Stack Developer, Tata Consultancy Services
Hyderabad, India

Sep 2023 – Present

- Contributed to a large-scale distributed retail platform comprising 80+ microservices, owning 10 core services across product, pricing, and supplier domains.
- Built and optimized event-driven data pipelines using Kafka and MongoDB to ensure reliable asynchronous data flow across services.
- Designed and implemented Spring Boot microservices focused on scalability, fault tolerance, and clean domain modeling.
- Developed an integration testing framework using Testcontainers, enhancing release reliability by eliminating environment inconsistencies.
- Created an internal AI-assisted debugging system (ES Bot) to automate log analysis, database queries, and Kafka inspection, significantly reducing time to identify root causes.
- Designed a containerized job execution system for large-scale data extraction to isolate heavy workloads and minimize impact on core services.
- Implemented bulk data export pipelines with secure access via Azure Blob Storage and time-bound SAS URLs.
- Reduced CI/CD pipeline time by 40% through Gradle dependency caching and build optimizations, and automated operational workflows to cut manual effort.

PROJECTS

Distributed Log Intelligence & RCA System

4 Months

- Built a centralized system to ingest and analyze logs using Kafka pipelines and Elasticsearch indexing.
- Designed pattern-based detection to identify anomalies and potential root causes across distributed systems.
- Enabled faster debugging by correlating logs and service failures across microservices.

Scalable Job Orchestration Platform

3 Months

- Designed a system to execute long-running jobs using dynamically provisioned containers, ensuring workload isolation.
- Implemented job scheduling, retry strategies, and failure handling for reliable batch processing.
- Optimized resource utilization by decoupling heavy jobs from core services.

EDUCATION

National Institute of Technology (NIT) Warangal

2019 - 2023

- Bachelor of Technology, Btech
